## 2 Assignment

Implement the operations of: Opening and Closing

1. Opening (erosion of A by B followed by a dilation of the result by B)

$$A \circ B = (A \ominus B) \oplus B$$

2. Closing (dilation of A by B followed by an erosion of the result by B)

$$A \bullet B = (A \oplus B) \ominus B$$

- Erosion of A by B:

$$C = A \ominus B = \{z | (B)_z \subseteq A\} = \{z | (B)_z \cap A^c = \emptyset\} = \{z | z + b \in A \text{ for every } b \in B\};$$

all the points  $z$  in  $A$  such that  $B$  is included in  $A$  when the origin of  $B$  coincides with  $z$ , i.e. all the points in  $A$  at which  $B$  fits  $A$ .

$C(u,v) = 1$  if the origin of  $B$  is located in  $(u,v)$  and all the elements in  $B$  with value 1 are 1 in the same region in  $A$ .

- Dilation of A by B

$$C = A \oplus B = \{z | (\hat{B})_z \cap A \neq \emptyset\} = \{z | [(\hat{B})_z \cap A] \subseteq A\} = \{z | z = a + b, a \in A \text{ and } b \in B\};$$

all the points  $z$  in  $A$  such that  $B$  flipped and translated by  $z$  has non-empty intersection with  $A$ , i.e. all the points in  $A$  at which  $B$  hits  $A$ .

$C(u,v) = 1$  if the origin of  $B$  is located in  $(u,v)$  and at least one of the elements in  $B$  with value 1 is 1 in the same region in  $A$ .

Compare your results with those of the Matlab functions, but don't take into account the pixels near to the margin since the treatment of these may be different.

## 3 Solutions

Implement the operations of: Opening and Closing

Function myOpening

```
1 function BW = myOpening(Img,SE)
2   BW = myErosion(Img,SE);
3   BW = myDilation(BW,SE);
4 end
```

Function myClosing

```
1 function BW = myClosing(Img,SE)
2   BW = myDilation(Img,SE);
3   BW = myErosion(BW,SE);
4 end
```

### Function myErosion

```
1 function BW = myErosion(Img,SE)
